PE02

Programming Exercise 2

a. How did you decide to implement your color scheme

I decided to experiment with all the options that CSS provided to me and made it something cybersecurity thematic.

b. What challenges did you run into styling the skills table.

Sometimes the code had typos and bugs yet by learning how to fix and identify these typos my skills I feel that my skills improved.

Modifications Done:

Header

```
<!-- Added required information and tested adding a gif-->>
<img src="https://cdn.discordapp.com/attachments/771073443205611601/1561583781985521714/IMG_3784.gif?ex=6ad6e1ba&is=6ad5903a&hm=14e38
<h1>Ethan W</h1>
<p>Sec Researcher</p>
```

Changed the header with my name and added a gif for testing purposes, which was functional. Gif was uploaded as a Discord attachment to avoid accidental deletions of it.

Ethan W

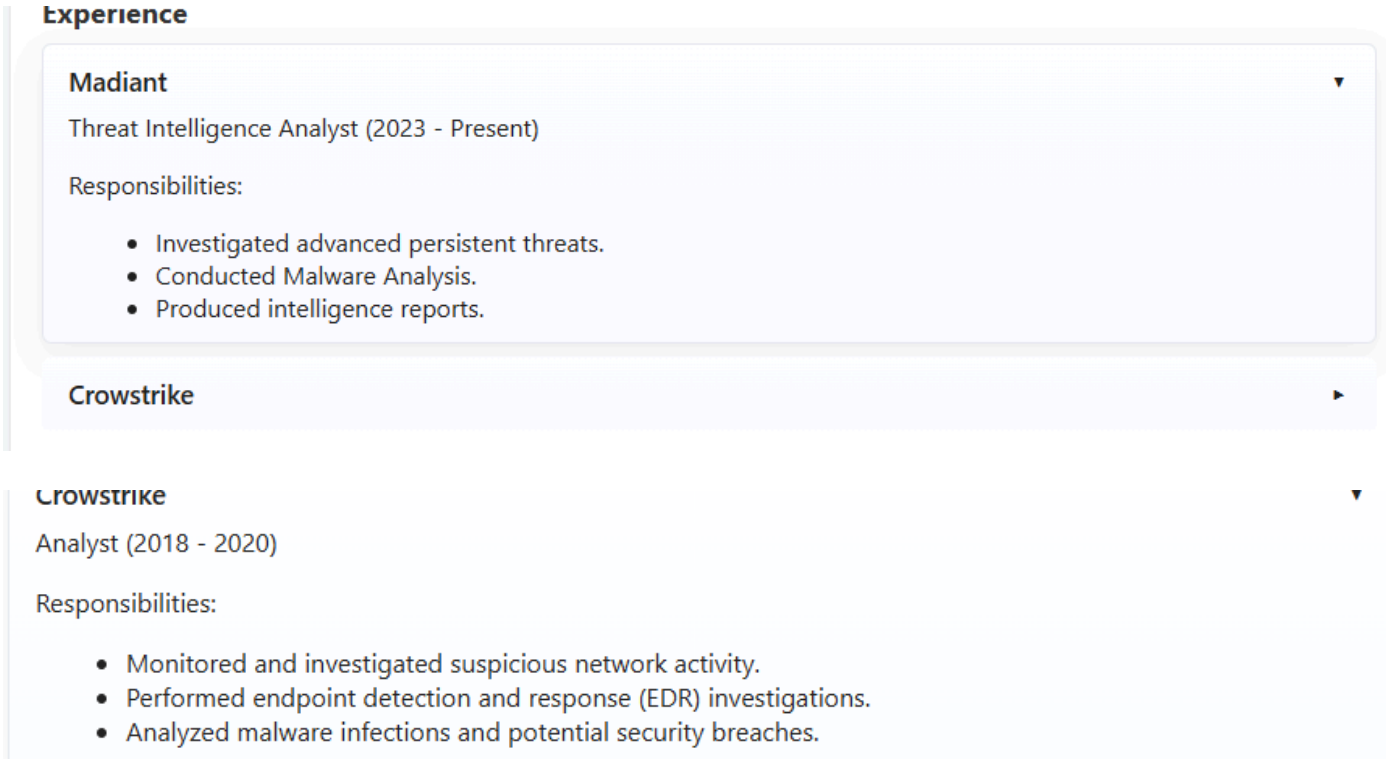

Sec Researcher

Experience Section

```
<h2>Experience</h2>
<details class="acordian-item">
    <summary>Madiant</summary>
    <p>Threat Intelligence Analyst (2023 - Present)</p>
    <p>Responsibilities:</p>
    <ul>
        <li>Investigated advanced persistent threats.</li>
        <li>Conducted Malware Analysis.</li>
        <li>Produced intelligence reports.</li>
    </ul>
</details>
<details class="acordian-item">
    <summary>Crowstrike</summary>
    <p>Analyst (2018 - 2020)</p>
    <p>Responsibilities:</p>
    <ul>
        <li>Monitored and investigated suspicious network activity.</li>
        <li>Performed endpoint detection and response (EDR) investigations.</li>
        <li>Analyzed malware infections and potential security breaches.</li>
```

Changed the experience section with false information.

Everything remains functional.

Details

```
<section class="acordian" id="skills">
    <details class=""acordian-item
        <h2>Skills</h2>
        <table>
            <tr><td>Threat Intel Analysis</td><td>Expert</td></tr>
            <tr><td>Malware Analysis</td><td>Expert</td></tr>
            <tr><td>Incident Response</td><td>Intermediate</td></tr>
            <tr><td>Python</td><td>Intermediate</td></tr>
            <tr><td>Linux Systems</td><td>Intermediate</td></tr>
        </table>
    </details>
</section>
```

Updated into a styled table, added expendable and collapsible functionality, alongside addded information relevant to the previously added positions. See modifications in <section class="acordian" id="skills"> This section utilizes <details> and <summary> as they were implemented for Experience.

Education Section

```
<section class="acordian" id="education">
    <details class=""acordian-item>
        <summary>Education</summary>
        <h3>University: City U Seattle</h3>
        <p>Degree: Bachelor Science of Cybersecurity</p>
        <p>Field: Computer Science</p>
        <p>Years 2022 - 2026</p>
    </details>
</section>
```

The education section was added, by displaying it is possible to view the university name, degree, field f study and years attended.

Degree: Bachelor Science of Cybersecurity

Field: Computer Science

Years 2022 - 2026

Color Style

Added set of colors similar to Milw0rm web application style.

```
/* Added my set of colors over here, inspired on Hiiworm theme */

body {
    background: var(--bg);
    color: var(--text);
    font-family: "Courier New", monospace;
}

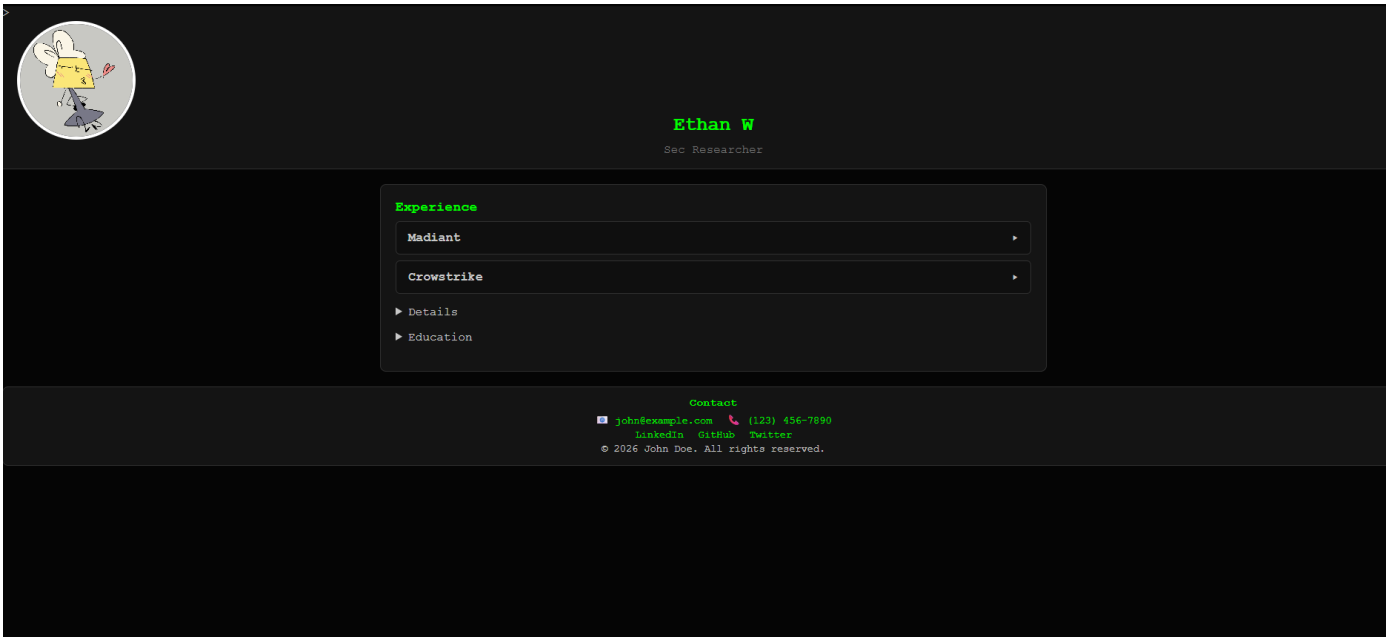

header, main, footer {
    background: var(--card);
    color: var(--text);
    border-color: #333333;
}

header h1, .acordian > h2, footer h3 {
    color: var(--accent);
}

.acordian-item {
    background: #111111;
    color: var(--text);
    border: 1px solid #333333;
}

.acordian-item[open] {
    border-color: var(--accent);
}
```

Added a black blackground, dark section, bright green and monospace typography. This to give a retro appearance while maintaining functionality.

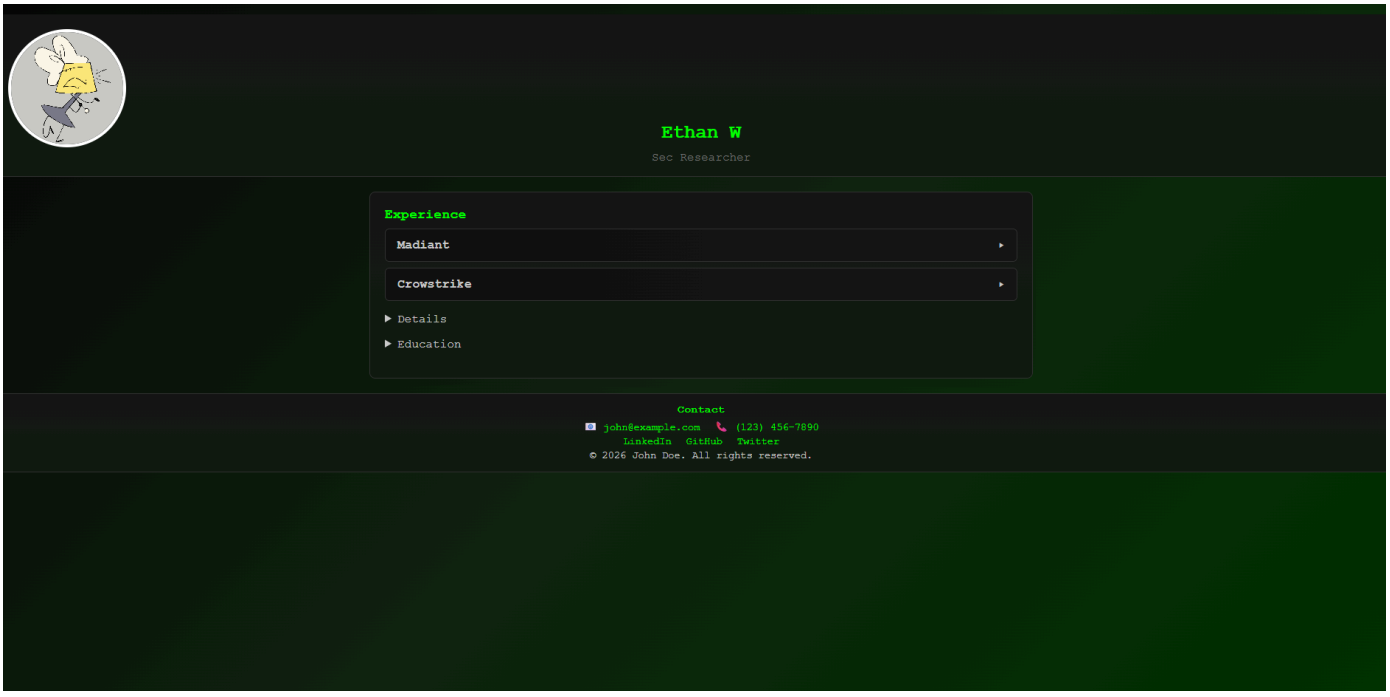

Decided to search how to add a gradient on the website and added it

```css
/* Gradient Testing */

body {
    background: linear-gradient(
        135deg,
        #080808,
        #102410,
        #003300
    );
    background-attachment: fixed;
}

header, main, footer {
    background: linear-gradient(
        180deg,
        #171717,
        #101c10
    );
}

.acordian-item {
    background: linear-gradient(
        90deg,
        #111111,
        #171717
    );
}
```

Skills Table

Added horizontal dividers which replaced cell borders with bottom borders, cell spacing increased to 12px from 10px, added a better color transition.

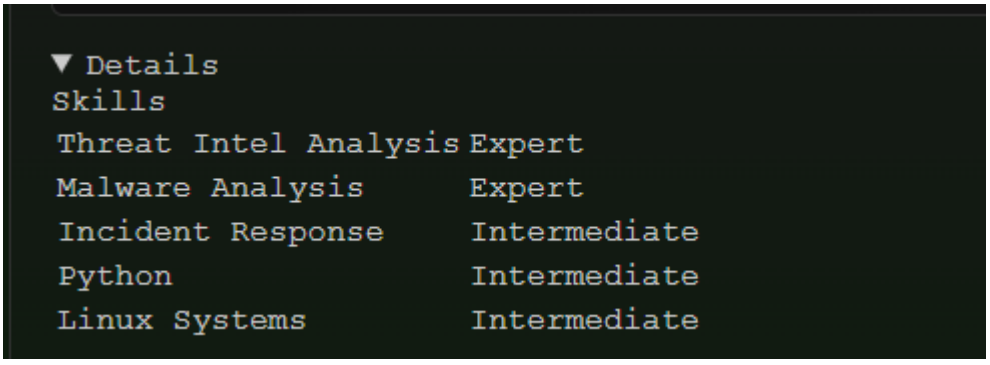

```css
.skills-table td {
    padding: 12px;
    border: 1px solid #333333;
    text-align: left;
}
/* Green Header */
.skills-table th {
    background: #003300;
    color: var(--accent);
}
/* Alternating row colors */
.skills-table tr:nth-child(even) {
    background: #202020;
}
/* Hover effect */
.skills-table tr {
    transition: background 0.3s ease;
}

.skills-table tr:hover {
    background: #003300;
    color: #00ff00;
}

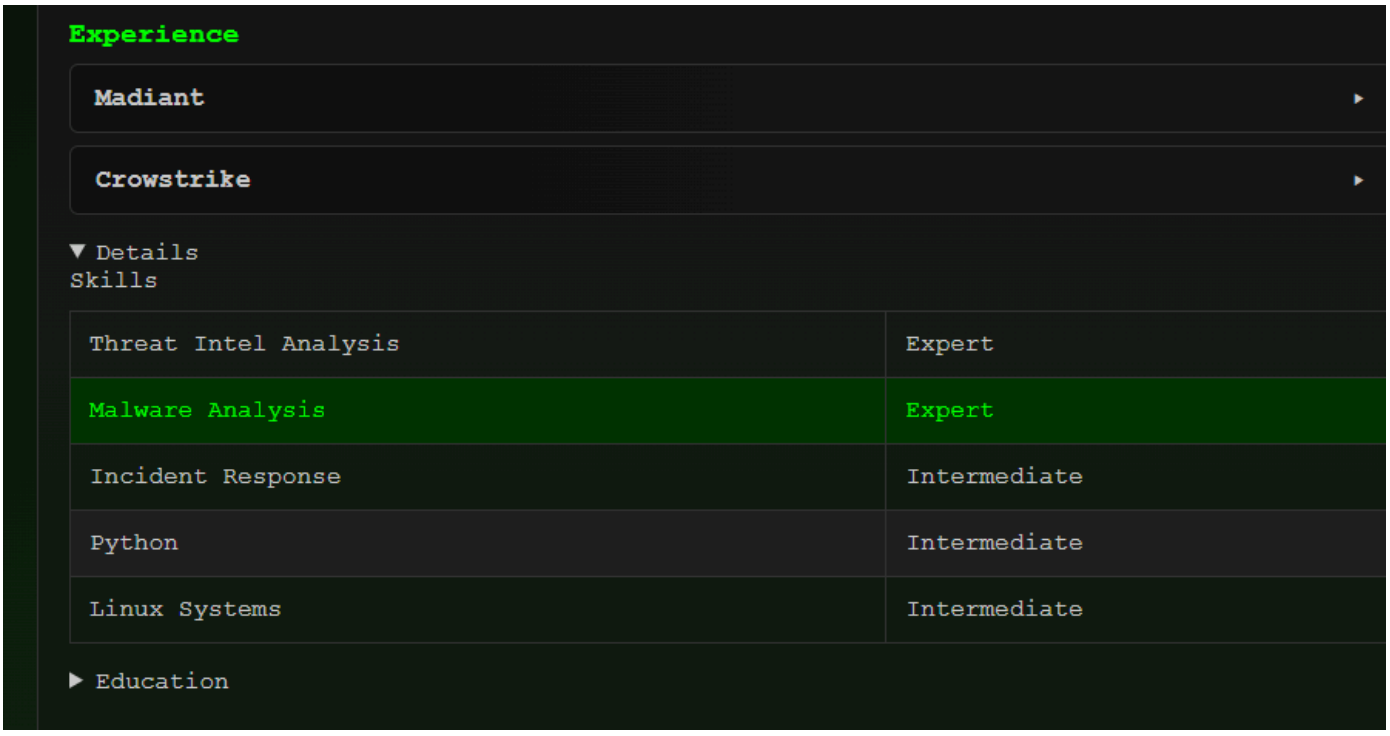

```

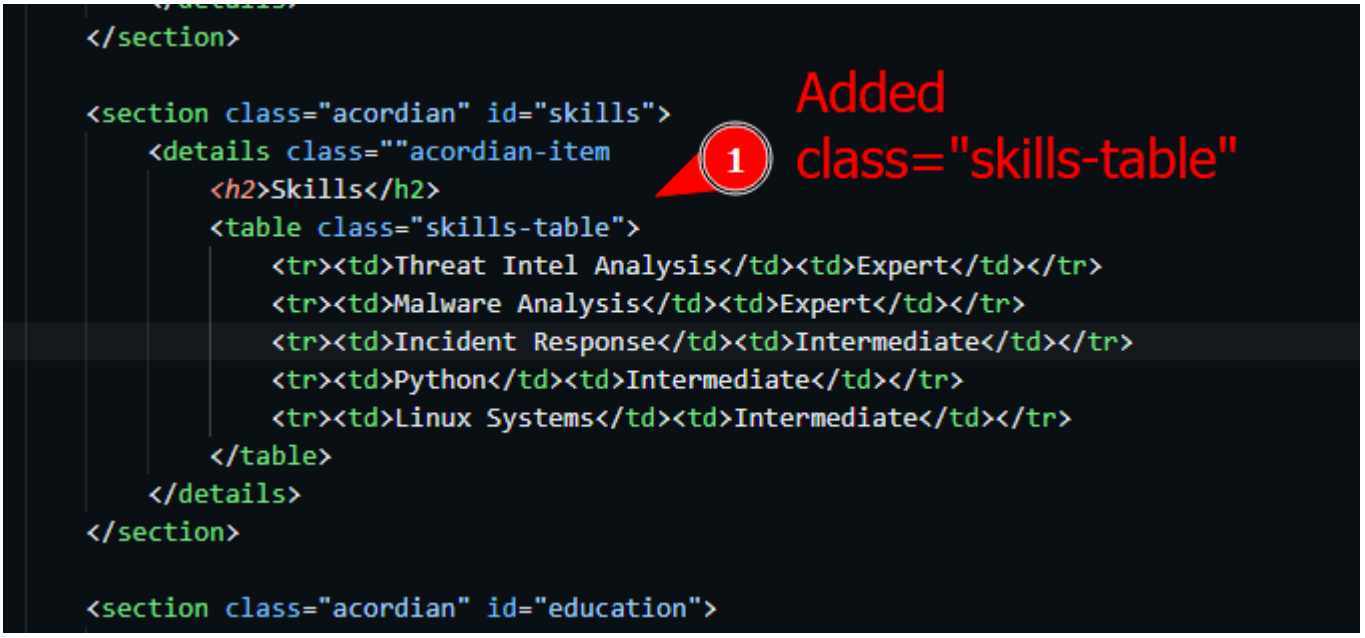

Fixed various errors in the html to allow the CSS style to be applied correctly

Final Result

I noticed that the current CSS only changes the text color when hovering over the accordion summary. Decided to leave that way as in a functional way it doesn't create problems. Notes: The work experience is not real.
